Group 19
Week 4 Minutes

Wednesday, January 27, 2016

Attendees:

Danielle Eckstrom
Robert Navarro
Ambrelle Palmer
David Sobota

Time: 7:00 PM – 8:30 PM

A skype chat was initiated with all group members present. We hadn't received for the work that we turned in last week so we proceed to start on the worksheets for this week.

Worksheet 22:
This worksheet was fairly straight forward and did not take us much time to complete. As a group we created the new functions and answered the algorithmic complexity questions at the end of the worksheet.

Worksheet 23:
For this worksheet we found that referencing the lectures for the week was very helpful. We were able to fill in the missing functions fairly quickly.

Worksheet 24:
This work sheet was a bit more difficult for us to finish. The first few functions did not take us long to figure out, but the linkedListIteratorRemove function took us a while. After drawing things out and talking amongst ourselves we were able to solve the problem.

Worksheet 26:
We worked through the algorithmic complexity problems by talking the problems out as a group. We made sure to completely understand why we chose the answer that we had. We then finished up the last few functions in the worksheet with little trouble.

At this point we had finished all of the worksheets for this week. We decided that we will meet again on **Wednesday, February 3, 2016.**
